"Año de Conmemoración del 40° Aniversario de la Gesta de Malvinas"

INSTRUCTIVO MULTIPOLIGONO

DIRECCIÓN GENERAL DE CATASTRO E INFORMACIÓN TERRITORIAL

DEPARTAMENTO DE INFORMACIÓN TERRITORIAL

¿Qué es un MPolygon en AutoCAD?

Las entidades MPolygon representan entidades mpolygon de AutoCAD. Se **componen de bucles de polilíneas bidimensionales que definen áreas que se pueden rellenar con patrones de líneas o degradados de color**. Dado que los bucles son líneas cerradas que se consideran límites de área, son esencialmente polígonos.

Los objetos MPolygon son **entidades personalizadas definidas en Autodesk Map** (y Land Desktop, Civil 3D). Sirven principalmente para la representación de polígonos de varias partes (por ejemplo, importados de archivos .SHP). Este objeto también tiene la propiedad Relleno.

Nota: Para ejecutar este instructivo es necesaria la herramienta **Autodesk Map (y Land Desktop, Civil 3D).**

Desactivar relleno
